

Installation of Porsche 928 Door Armrest Support

Copyright 2008, 928 Motorsports LLC All Rights Reserved

- 1) Pull the inner door handle as if to open the door, and remove the small Phillips screw that is hidden underneath.
- 2) Open the map pocket, you will find two 10mm screws you must remove.
- 3) At the front of the door there is the hole for the air duct. Look inside that hole and there is another bolt to remove. I find it easier to remove the plastic collar (turn it 1/4 turn) and remove it to make it easier to get at that screw.
- 4) Use a flat putty knife and go around the edge between the inner door panel and the door and locate the plastic clips that hold the edges down. A gentle pry up with the putty knife will pop those out.
- 5) The inner door should be completely loose now. Lift up on it to remove, it hooks on by the upper rubber lip at the window. Be careful about the speaker and electric mirror wires. Unplug the speaker wires where they attach at the back of the speaker.
- 6) Place the inner door face down on a clean piece of floor or a blanket. Install the steel armrest reinforcement to it now.
- 7) Reverse the procedure 5 through 1 to re-install the door liner.
