

## Shoulder Harness Mount Installation Instructions

Open the rear hatch and fold the back seats forward. Take a 17mm socket and remove the 3 nuts from the top of the shock tower as shown.

Use a screwdriver and pry up the dust cover and set it aside. It will not be going back on.

**Your installation should now look like this:**

**Place the seat belt mount over the shock bolts as shown....**

...and tap down with the socket and a hammer until it sits down flush.

Re-install the washers and the nuts, and tighten.

**BELTS.**

Take the two shoulder harness straps and weave them through a single Buckle as shown.

**Weave the straps through the shoulder harness mount and back into the Buckle as shown...**

**...and finally out the other side. You may have to adjust them for length after you sit in the car and try them on.**
